

# Import Setup

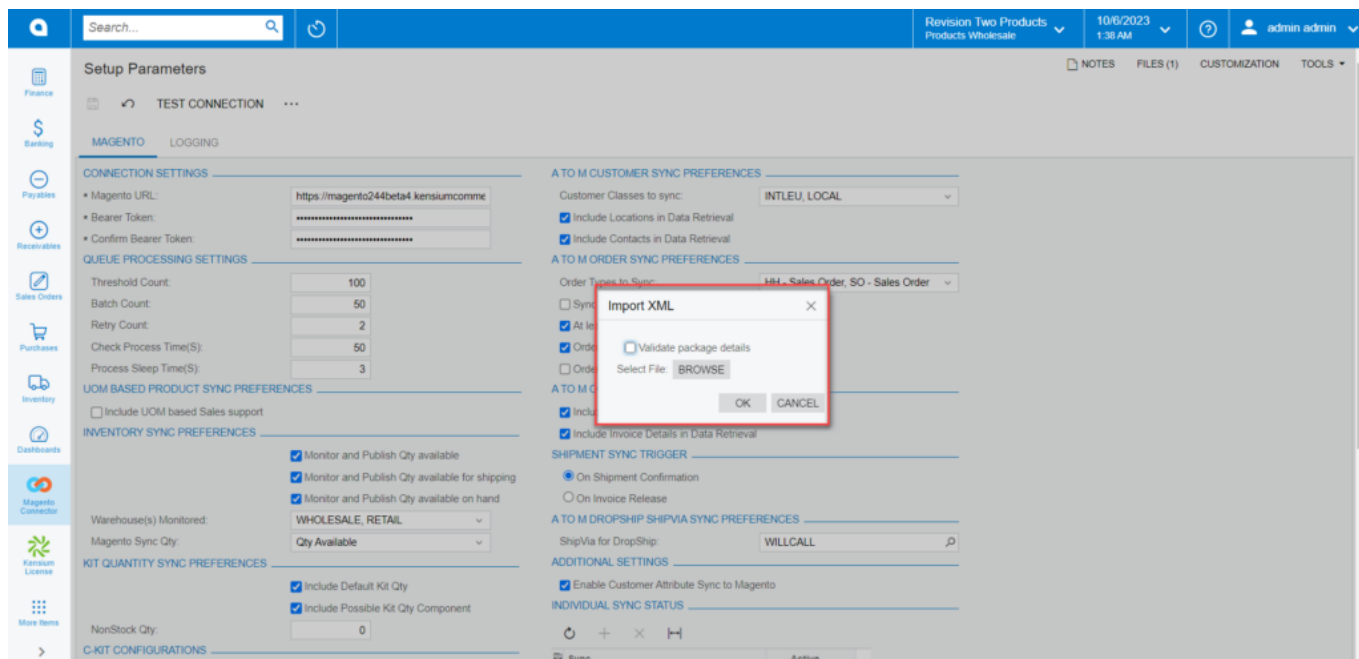

You can import the setup by using the **[Import Option]**. You can import the XML in Acumatica, which will be validated and imported.

A smart popup will appear on the screen as **[Import XML]**. This import routine will have an option to validate the package details with a check box. If it's enabled the application will validate the package details.

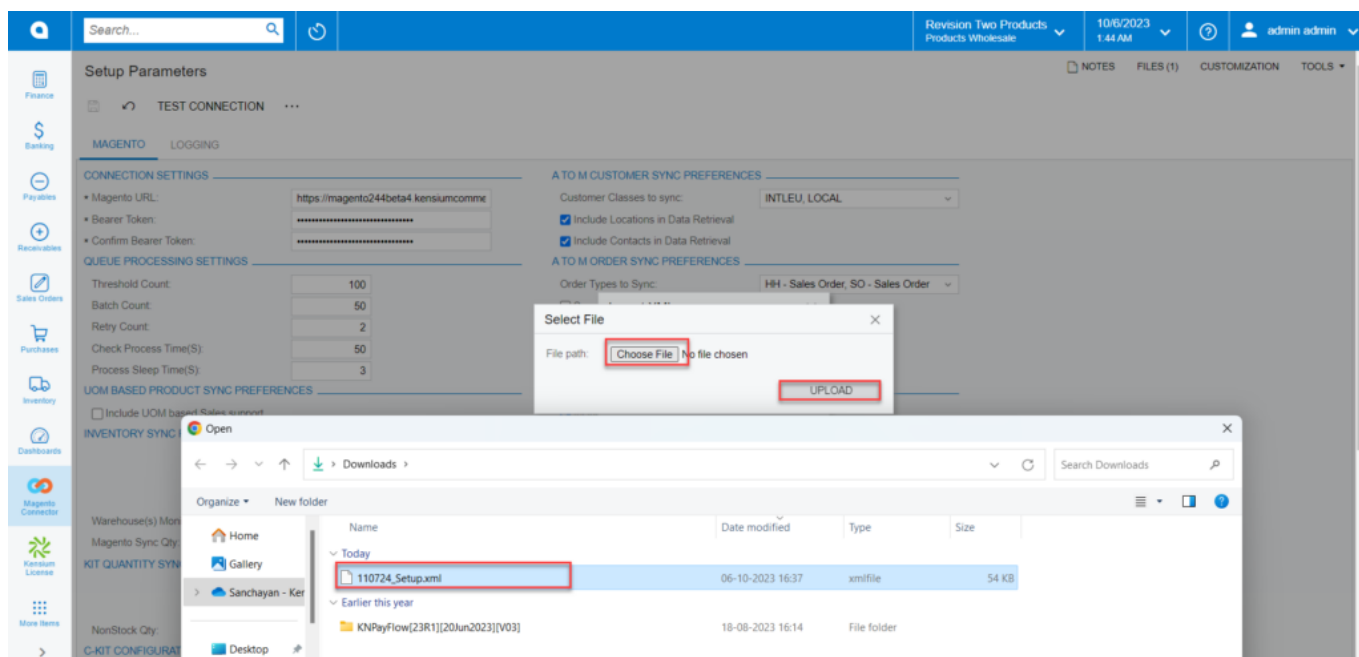

By using the browse option, you need to choose the setup parameters file.

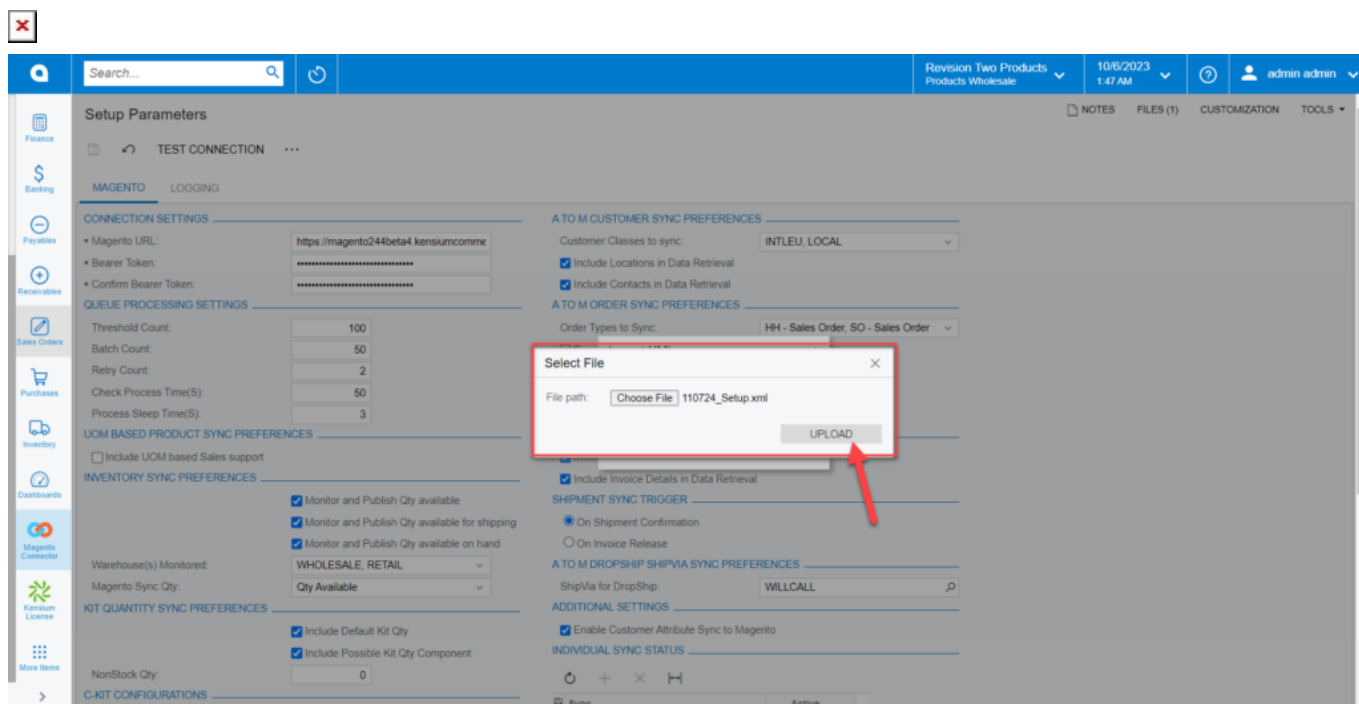

Entity	Store	User/Contact ID	ERP ID	External ID	External Description	Status	Last Error	Last Operation	Last Attempt
