

Mapping Product Attribute Schema

Product Attribute Schema must be mapped to ensure product data can be moved from Acumatica to Magento. Acumatica attributes are considered metadata and must be mapped before syncing products.

To begin, select an attribute that has been added to an item class that is enabled for Magento sync in Acumatica. Navigate to the Magento Connector workspace in Acumatica and select Product under the Schema Management section.

1. Click Refresh Schema.
 - a. The attributes will refresh successfully with a green checkmark.
2. Toggle the Active box next to the attribute that must be mapped.
3. Click Save.

To view the successfully synced attribute, navigate to the Store's workspace in Magento and select Attribute Set. Attribute Sets are equivalent to Acumatica item classes.

- Click the Attribute Set (item class) that the Acumatica attribute is assigned to.
- In the Groups section, scroll down to the Acumatica folder.
- The attribute will appear in the Acumatica folder.

Attribute Set in Stores

The screenshot shows the Adobe Connector interface. On the left is a vertical navigation menu with icons for Dashboard, Sales, Catalog, KENSUM A-M CONNECTOR, Customers, Marketing, Content, Reports, Stores, and System. The main area is titled 'Attribute Set in Stores'. At the top right, there are buttons for 'Back', 'Delete', 'Reset', and 'Save'. A yellow banner at the top says 'It's time to change your password.' Below this, there's a section titled 'Edit Attribute Set Name' with a text input field containing '2023' and a note 'For internal use'. To the right, there are two panels: 'Groups' and 'Unassigned Attributes'. The 'Groups' panel has buttons for 'Add New' and 'Delete Selected Group', and a note 'Double click on a group to rename it.' It contains a tree view of attribute groups, with 'Acumatica' and its sub-item 'is_uom' highlighted with a red box. The 'Unassigned Attributes' panel lists various attributes like 'manufacturer', 'activity', 'style_bags', etc., with 'Acumatica' and 'is_uom' also listed.

Product Attributes associated with the Acumatica item class that they belong to.

Default Magento attributes will appear in the General folder. It is important to note that the connector will not adjust any existing attributes located in attribute sets in Magento. If the attribute appears in the Unassigned Attributes list, the attribute may be dragged and dropped into the Acumatica folder.

Now that the attribute has been assigned to the Attribute Set, the attribute can be made and mapped in Magento for syncs. Navigate to Magento's Kensium A-M Connector workspace and select Product in the Mapping section.

1. Select a Store View in the top left-hand corner.
2. Click Update Schema.
 - a. If the Magento Product Attribute already exists for the Acumatica Product Attribute, skip stepping 8.
3. Click Get New Attributes
 - a. The list of unmapped attributes from Acumatica will be rendered.
4. Click Create next to the Acumatica attribute that will be made into a Magento attribute.

5. Under Attribute Properties

- ✘ a. Enter a Default Label
 - This is the display name of the attribute.
- b. Enter a Catalog Input Type for the Store Owner
 - This will update the interface of the options for the attribute.
- c. Enter the Values Required option.
 - This will determine whether the attribute is a required field.

6. Under Advanced Attribute Properties.

- a. Enter an Attribute Code.
 - This is an internally used code for attributes.
 - b. Enter a Scope.
 - This will designate where the attribute will be visible.
7. Click Save Attribute. The Magento Attribute will now be created based on the information from the Acumatica Attribute and appear in the Magento Product Attribute column of the Product Attribute mapping page.
8. Click Update Schema.
9. Click on [Map Product Attributes].
10. Select the [Magento Product Attribute].
11. Select the [Acumatica Product Attribute].
12. Click on Save.

Map Products Attribute from the pop-up.

The screenshot shows a 'Product Attribute Mapping' pop-up window. It has a title bar with a close button (X) on the right. The window is divided into three columns: 'Magento Product Attribute', 'Acumatica Product Attribute', and 'Use In'. The first row shows '001 Height [attr_001_height]' in the first column, 'Description (Short) [Ecommerce]' in the second, and 'Create' in the third, with a 'Delete' button to the right. The second row shows 'Please select' in the first column, 'Please select' in the second, and 'Please Select' in the third, with a 'Delete' button to the right. Below the table is an 'ADD' button. At the bottom right of the window is a 'Save' button.
