Sync Configuration Details

Field	Field Type	Description	
Acumatica Dashboard			
Enable	Drop-down	If you want to send any updates to Acumatica from Magento, you must enable the option. Options available • Yes [Recommended] • No [If selected, the data processed in Magento will not be reflected on Acumatica irrespective of the result pass/ failed].	
Attribute Sync			
Product	Drop-down	Option available. • **Enable:** This should be enabled. Any kind of product attribute should be accepted on the Magento side. • **Disable:** This option will prevent Magento from accepting the attribute from Acumatica.	
Customer	Drop-down	Option available. • **Enable:** This should be enabled. Any kind of customer attribute should be accepted on the Magento side. • **Disable:** This option will prevent Magento from accepting the attribute from Acumatica.	
Category Sync			
Acumatica Default Company	Text box	You need to enter the default company name if you wish. You can leave this field blank also.	
Category Sync	Drop-down	Magento will only process the Item Sales Category from Acumatica if it's enabled. You will have two options. • Enable • Disable	
Sync direction	Drop-down	Sync Director must be set from Acumatica to Magento. The application will not provide any choice for this.	

Acumatica to Magento Exclude Required Attributes	List	To make the mapping perfect, it's mandatory to have the same field on the Magento and Acumatica side. However, there are a couple of fields which are not present in the Acumatica. In those cases, you need to exclude a couple of attributes. Otherwise, Magento will not allow you to save the data. The following should be available on the list. • Available Product Listing Sort By • Default Product Listing Sort By • Include in the Navigation Menu • Is active. • Name
Republish Message to Queue if Deadlock Error	Drop-down	Due to some technical issues on the backend (SQL Service stopped) sometimes the data doesn't get processed and throws a failed status. In those scenarios, this option will again process the data if that has failed due to the deadlock error. The Deadlock option has been introduced in most of the syncs. • **Enable (Recommended):** If enabled, the application will pull up the failed data from the database and process it again. Magento will republish the data automatically. • **Disable:** Magento will not be able to republish the data automatically.

Product Stock Item Sync

Product Stock Item Sync	Drop-down	**Enable:** It should always be enabled to sync up the products from Acumatica to Magento. **Disable:** The product created by Acumatica will not be synced into Magento. In the connector's logs, you will be able to see the errors.
Sync Direction	Drop-down	The sync direction must be always Acumatica to Magento for the Product Stock Item.
