

Sync Configuration in Magento

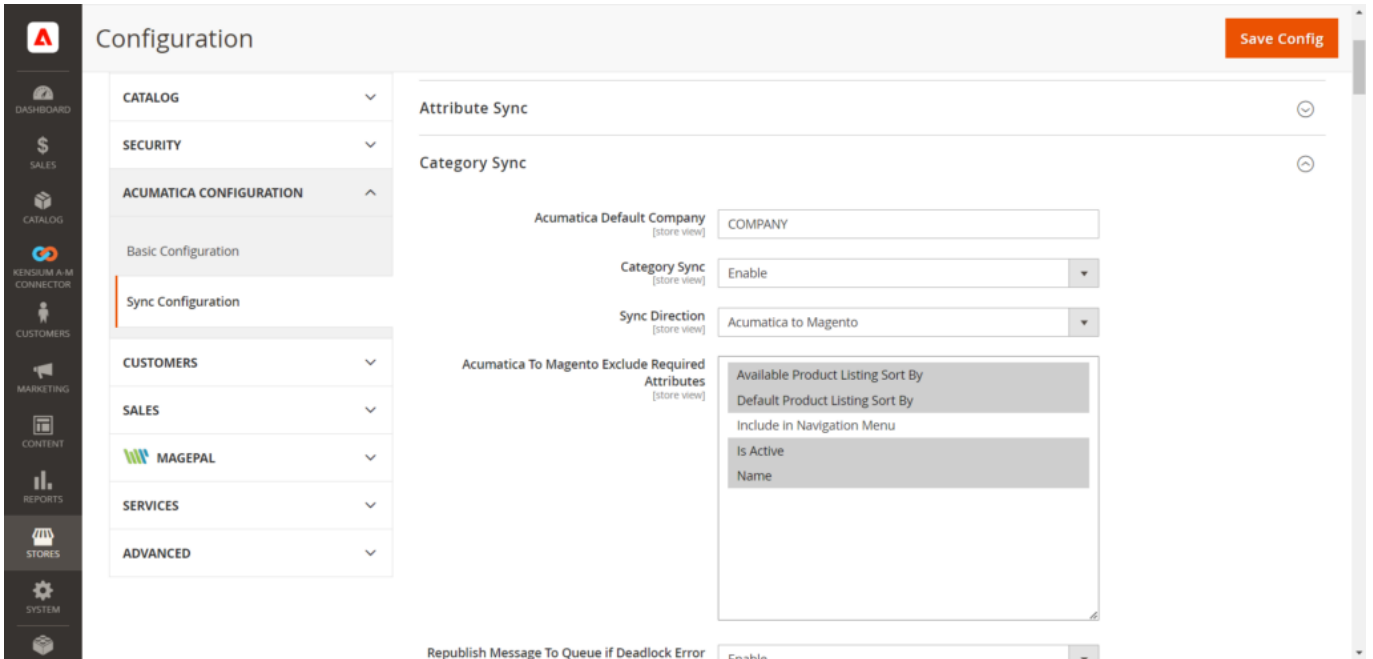

Sync Configuration in Magento allows a user to enable syncs between Acumatica and Magento. Navigate to the Kensium A-M Connector workspace in Magento and click Sync Configuration.

1. Select a Store View.
 - a. The Store View indicates which website (in Acumatica terms, which branch) the configuration will affect. If the configuration applies to all websites, and thus stores and branches, active on Magento, select Default Config. Otherwise, select the website or store view that is specific to the configuration that is being completed.
2. Toggle a Sync to enable to enable the sync for a particular sync.
3. Select a Sync Direction for the sync.
4. Click on **[Save Config]**.

You need to repeat these steps for each sync criteria that are necessary for syncs.

Option to Sync Configuration in Kensium A-M Connectors

The screenshot displays the 'Configuration' interface for 'Kensium A-M Connector'. The left sidebar contains a navigation menu with categories: CATALOG, SECURITY, ACUMATICA CONFIGURATION (expanded to show Basic Configuration and Sync Configuration), CUSTOMERS, SALES, MAGEPAL, SERVICES, and ADVANCED. The main content area is titled 'Configuration' and features a 'Save Config' button in the top right. The 'Sync Configuration' section is active, showing settings for 'Attribute Sync' and 'Category Sync'. Under 'Category Sync', the following settings are visible: 'Acumatica Default Company' (COMPANY), 'Category Sync' (Enable), and 'Sync Direction' (Acumatica to Magento). A list of 'Acumatica To Magento Exclude Required Attributes' includes 'Available Product Listing Sort By', 'Default Product Listing Sort By', 'Include in Navigation Menu', 'Is Active', and 'Name'. At the bottom, the 'Republish Message To Queue if Deadlock Error' setting is set to 'Enable'.
