

Managing Acumatica Configuration in B2B

For Better B2B you need to configure the Acumatica Configuration within the B2B app. This section includes the following options.

- Acumatica Connections
- Acumatica Endpoint URLs
- Kensium Commerce
- Master Data
- Queue Configuration

Field	Field Type	Description
# Acumatica Connections		
Acumatica Base URL	Textbox	Enter the Acumatica URL.
Username	Textbox	Enter the Username of the instance.
Password	Text Field	Enter the Password of the instance
Company	Text Field	If you have multiple companies, you can enter the desired company name
Test Connection	Button	Upon clicking on the Test connection, the app will check the connectivity between Acumatica and the BigCommerce B2B app. In other words, the Rest API will check the credentials and Acumatica URL. On a successful connection, you will be able to view a success message.
