

Custom Fields Creation in Braintree Portal

- Login into the Braintree sandbox URL <https://sandbox.braintreegateway.com/login>
- Navigate to the settings icon and click on the processing button.

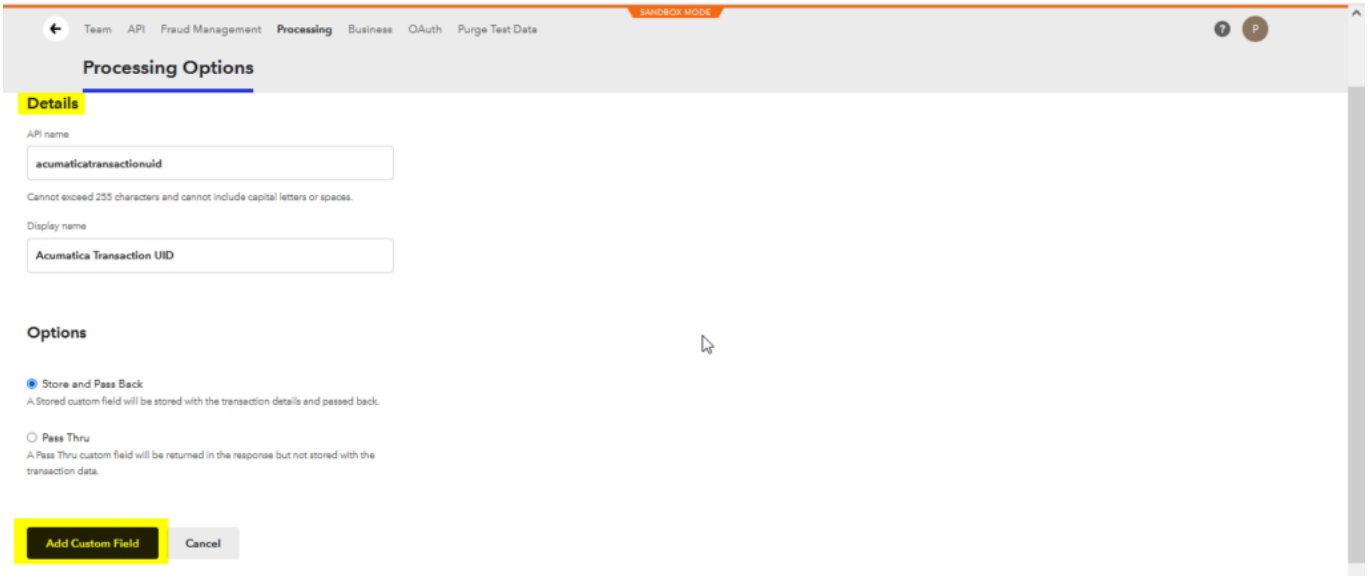

Processing

Custom Fields

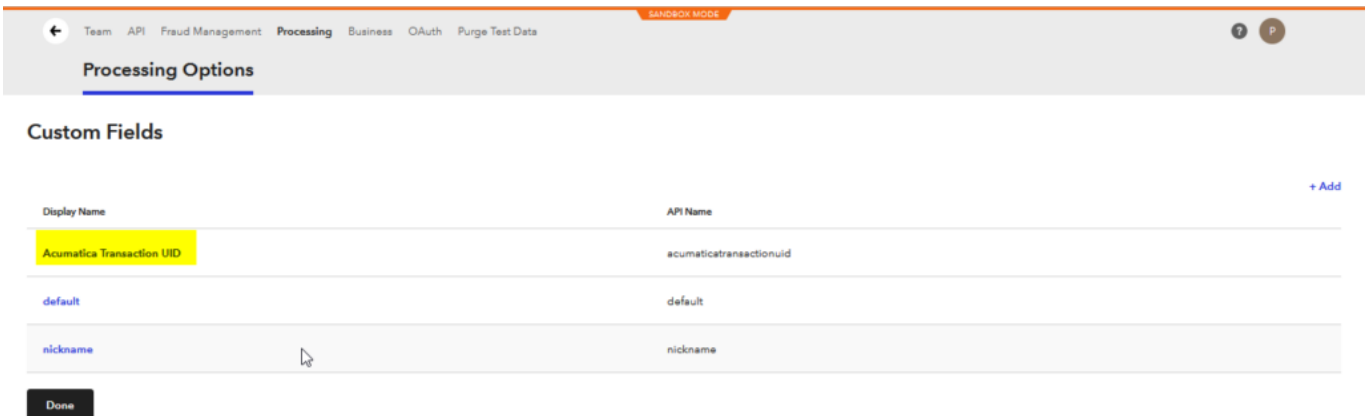

- Under the Transactions section we have a custom field, click on the options action.
- Click on the **[Custom]** fields option.
- ✗ • Create a **[New custom]** field by entering the below details:
 - API Name: acumaticatransactionuid
 - Display Name: Acumatica Transaction UID

The screenshot shows the 'Processing Options' page with the 'Details' tab selected. The 'API name' field contains 'acumaticatransactionuid' and the 'Display name' field contains 'Acumatica Transaction UID'. Below these fields, there are two radio button options: 'Store and Pass Back' (selected) and 'Pass Thru'. At the bottom, there are 'Add Custom Field' and 'Cancel' buttons.

Processing Details tab on Braintree

- The created Custom fields will be displayed.
- Click on **[Done]** to complete the process.

The screenshot shows the 'Processing Options' page with the 'Custom Fields' tab selected. It displays a table with three rows of custom fields. The first row is highlighted in yellow and matches the details from the previous screenshot. The second row is 'default' and the third is 'nickname'. A '+ Add' button is in the top right corner, and a 'Done' button is at the bottom left.

Display Name	API Name
Acumatica Transaction UID	acumaticatransactionuid
default	default
nickname	nickname
