

Scope

The primary goals of BYP extension in Acumatica ERP are as follows:

- Allows users to create customized products with flexible build options. They can choose components, attributes, and configurations to build unique products.
- Includes product serialization for efficient tracking and management within the Acumatica ERP system.
- It empowers users to specify all necessary components for a product, including raw materials, parts, and sub-assemblies. It ensures that customized products meet desired specifications and requirements.
- Users can assign quantities and prices to individual components, enabling accurate cost calculation and pricing for customized products. Further, it allows users to generate precise quotes or estimates, promoting transparency and clarity in the sales process.
- Apply rules and logic to aid users in selecting suitable options for product design. These rules consider factors such as compatibility, availability, pricing and more.
