

# Install and Configure C-Kits Package

## Install and Configure Customizable Kits Package

The first step to install the feature is to run the latest version of the Customizable Kits package.

To begin, the following pre-requisites are required for the installation and configuration of the Customizable Kits:

- Download the latest version of the [Customizable Kits package](#)

The package can be obtained through a VAR using the Acumatica portal, through an Account Manager by contacting the Acumatica Helpdesk, or through the Acumatica public site.

1. Save the .zip file of the Customizable Kits package to the local hard drive.
2. Navigate to the **Customization** workspace.
3. Click **Customization Projects**.
4. Click the **Import** button.
5. Select **Import New Project**.
  - Select the Customizable Kit .zip file from a local folder.
  - Click Upload.
6. Toggle on the box(es) of the packages that need to be published.
  - If a package is already published in the instance that needs to remain published, the package should have a level value associated with it, and the box should be toggled on prior to publishing.
7. Click **Save**.
8. Click the **Publish** button.
