# Setup C-Kits in Inventory

![x]

Setup Customizable Kits in Inventory

The inventory serves as a backup between production and sales to smooth out the product supply and ensure that products are available when customers place their orders.
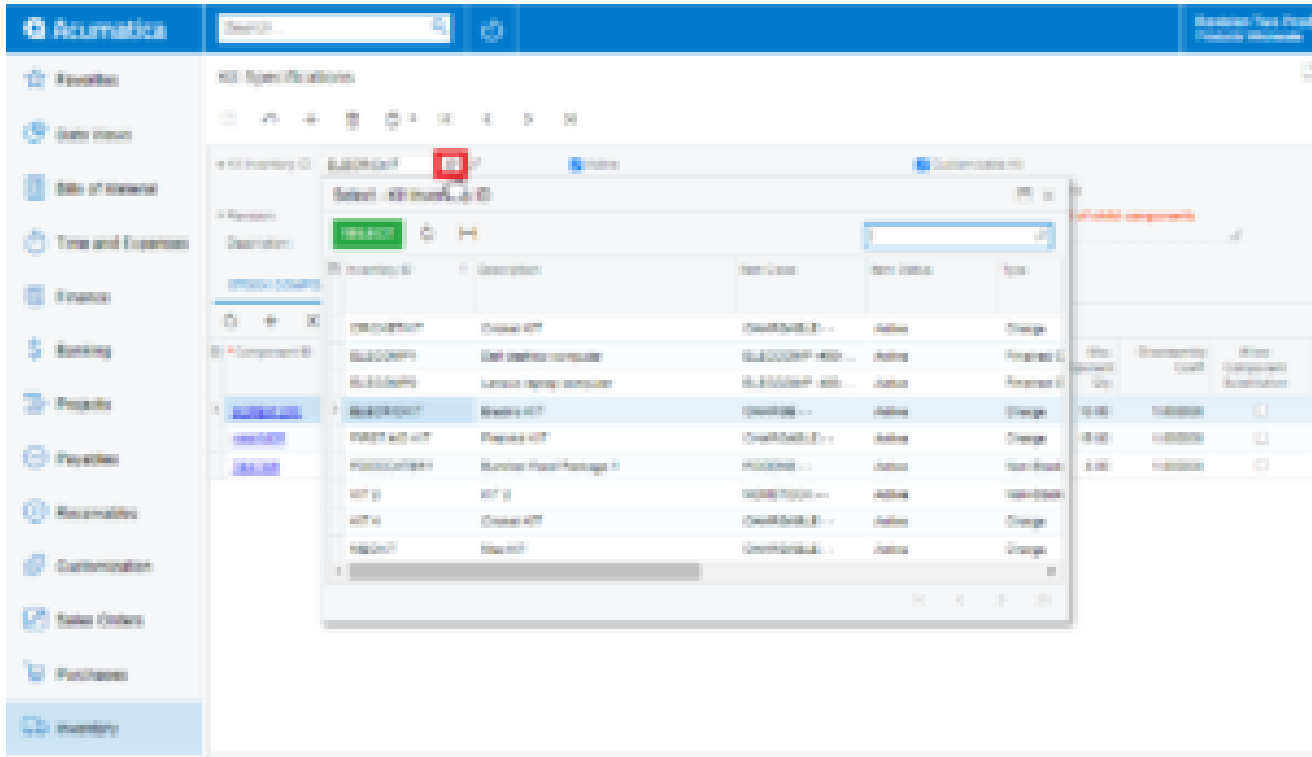

Steps to configure kit specifications in Acumatica inventory:

- Navigate to Acumatica inventory and search for **Kit Specifications.**
- Select **Kit Specifications** from the search results.

Search for kit specifications

- Click the selector icon, then choose a product from the inventory.

![fusion]

Product search using selector

- Check the box provided against the **Customizable Kit,** to enable the Non-stock items accessible and customizable.
- Check the box provided against the **Not to Explode on API Sync** to stop child items from exploding on price when the product explodes.
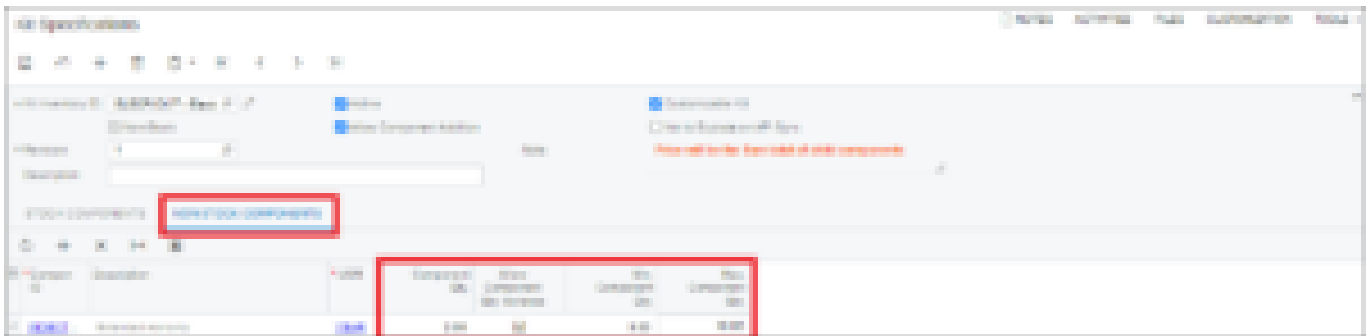

- Enter **Min** and **Max** quantity for the component.
  - The permitted update quantity should be between the set variance min and max values.

Min and Max Quantity

If the Min quantity is **2** and the product quantity entered as **2**, the system calculates as **2*2** so the Min quantity would be **4**

If the Max quantity is **4** and the product quantity entered as **2**, the system calculates as **2*4** so the Max quantity would be **8**

- Check the box provided against **Allow Component Quantity Variance**

Configure kit components for non-stock items
