Features

Menu: Configuration / Features

Feature: Base

Editions: Cloud, Corporate, Store

The Features page enables support to selectively enable and disable POS features. Features are the backbone of the flexibility of POS deployments.

Features can be categorized into four broad categories:

1. Fusion POS

   - These features are optional features.
   - Administrators can manually enable and disable these features as needed.

2. Fusion POS (Supporting)

   - These features support the optional Fusion POS optional features, and are automatically enabled by other features or by the [Setup Guide](#).
   - Administrators do not need to manually enable these features.
   - If disabling an optional feature, an administrator can manually disable supporting features if they have determined that the supporting features are not used by other optional features.

3. Fusion POS (Other)

   - These features are either experimental, obsolete, or intended for a organization-specific customization.
   - These features should only be enabled upon special request.

4. Other

   - There are many other features that support POS functions.
   - These features are enabled and disabled by the Setup Guide and POS features.
   - These features should only be manually enabled upon special request.

As there is some complexity to how these features can be arranged and configured, this section describes the most important features that can be manually enabled and disabled.

Optional Features

The following is a list of optional POS features, and when they can and should be enabled.

Feature	Tenant Type	Use Cases
About Links	Cloud	Cart App (recommended)
Acumatica *	Corp	Acumatica integration (e.g. rollup). You must select the feature appropriate to your installed version of Acumatica.
Avatax	All	Perform sales tax calculations using the Avalara Avatax tax processor.
Barcodes	All	Create/print/download bar code images.
Basic Tax	All	Store-based tax calculations using tax schedules that are configured for the Fusion Register. Review tax requirements with a tax professional before enabling.
BridgePay Payments	Cloud	Required for online orders submitted via the Cart App.
Checkout	Cloud	Required for online orders submitted via Cart App or Order Pad.
Envoys	Cloud	Enable 'influencer' members to promote the service and sign up new members.
Events	Cloud	Manage and display customer-facing events.
Fortis Payments	Any	Perform payment transactions using the Fortis payments processor.
Fulfillment	Any	Fulfill orders in POS, from this location.
Gift Cards	Cloud	Track physical and electronic gift cards.
Locations	Cloud	Manage and display locations to the public.
Loyalty Points	Cloud	Generate, track and consume loyalty points.
Members	Cloud	Support self-managed member accounts; required by Cart App.

![fusion logo]

Feature	Tenant Type	Use Cases
Membership	Cloud	Add membership levels to member accounts.
Orders	Cloud	Required by Checkout.
POS Browser Integration	Corp, Store	Extended UI for Fusion Registers.
Products	Any	Display product information.
Purchases	Cloud	Capture, record, analyze and view purchase information from multiple sources. This is automatically enabled if you enable Loyalty Points.
Purchases Extract	Corp	Gather purchase activity from Fusion Register data, and send it to the Cloud tenant. **Important**: remember to enable this feature on the Corporate tenant if you'd like to record purchases for Register activity, e.g. to generate loyalty points.
Rollup	Corp	Consolidate multiple Fusion Register sale transactions into a single ERP transaction, to reduce ERP load and activity.
