

Markdown Format

Fusion POS supports rich-text formatting through support of the *Markdown format*.

In general, Markdown is a simple format that makes it easy to represent plain-text, while preserving paragraphs. It also has simple control characters that can help basic formatting.

Some primary advantages of Markdown are:

- If all you want is plain-text, just use plain-text.
- It is easier to import and export (for example, in CSV files).
- It is less prone to security vulnerabilities than other formats.
