

Multiple Site Configurations

Moreover, you can establish several stores by using the same **[Site Configurations]**.

- After creating Multiple stores, you can activate the **[Active]** Radio button in site Configuration to sync the data to a specific store.

The screenshot displays the 'Site Configuration' page for a site named 'Test'. The 'Active' radio button is selected and highlighted with a red box. The settings are organized into four main sections:

- ACCESS CONFIGURATION:** Includes fields for Account Id, Profile Id, Developer Key, Password, Confirm Password, Refresh Token, Application Id, and Shared Secret.
- FTP CONFIGURATION:** Includes fields for Hostname, Username, Password, Confirm Password, and Input Directory.
- CONFIGURATION FOR SALES ORDERS:** Includes fields for Entity Usage Type, Branch, Default Warehouse for Non-FBA Orders, Customer Class, Default Order Type, Default Automatic Ship Via, Default Shipping Terms, ChannelAdvisor Payment Status, and Number of days to go back for Order Import.
- CONFIGURATION FOR FBA ORDERS:** Includes fields for Entity Usage Type, Branch, Warehouse, Customer Class, Default Box for FBA Orders, and Default Shipping Method for FBA Orders.

Site Configuration

- The activated store will be available under **[Attributes]** in **[Inventory]**.
- The Active Rithum Connector site will be available in **[Associated Rithum Connector Sites]**.
