	Access Token: An access token is passed along with every request to ChannelAdvisor. This token expires after 1 hour at which time the developer may use the refresh token to obtain a new access token. For security reasons it is recommended that access token are passed in the HTTP Authorization Header of the request in the form of a Bearer token. However, we also allow the access token to be passed through the query string.							
	xmtNdx9djamFx9C0M6ZCxXaGry9Tu1Y2Q9yPwVCzyFU-26077							
	Refresh Token: If creating an offline application that cannot redirect a user through the OAuth 2.0 grant screen, this taken may be used to obtain a new access taken. A refresh taken does not expire, and only becomes invalid when the developer deletes the integration or a user revokes access to the application. Copy this taken and save in a secure location as it is not available once you leave this page.

Generated Refresh Token

- You need to copy the [Refresh Token Id] and paste in Refresh token field in Acumatica.
- The Application ID, Shared Secret and Refresh Token id is not mandatory, however, to establish the API connection these fields are required.
