# Schema Management

The Kensium's Commerce Framework in Acumatica will contain a feature titled **[Schema Management]** which is used to manage the Mapping between Acumatica and destination Systems. The selected fields will sink the destination systems and transfer the value via the SellerCloud Connector. You will receive a notification when the data is updated, and then the JSON is framed and submit it to SellerCloud Connector. Under the **[Schema Management]** you will have the following options as shown in the figure below.

- **Product**
- **Category**
- **Customer**
