# **New Features and Enhancements**

# Version 8.14.1

## **QuickPack introduced on the Handheld**

Quick Pack has introduced a new module on the Handheld, enabling users to pack without using Fusion Containers or Transfers. The packed quantity can be determined by checking the Packed Qty field value.

To access this module, navigate to the [Shipping Module] on the Handheld and click on the Quick Pack module

Figure: Shipping Module on Handheld

You will be redirected to the following screen with the new option [QUICK PACK].

Figure: [QUICK PACK] on the shipping module

Most of the features are the same as the [PACK] screen. However, the major difference is in the [PACK] screen you can pack the items when the [PICK] status is PICKED, but in the [QUICK PACK] screen we can select the **Open, Partial and Pick Up Records.** 

#### Illustration:

#### **Pick Status: Partial Pcik**

Navigate to the Shipment Screen and select a record where the Pick Status is Open. Change the Pick Status to [Partial Pick].

No Fusion Containers will be created using the [Quick Pack] module. Usually, if we use [Pick] as a Picked Status a Fusion Container will be created. Only when Pack, Pick Pack or MultiPack is used will only create the Containers.

### **Barcode Column Removed from Stock Item Screen**

In the Stock Item screen **[Barcode]** column has been removed under the **[Unit of Measure]** in the [General] Tab. After the removal of the Barcode column, the Stock Item screen view is shown below:

Figure: Barcode column removed

## New GI created to check the next Wave Pick Number

A new GI has been created in Acumatica, to retrieve the WavePick number. For that, navigate to the [Generic Inquiry] under the [Profiles] section and select the Inquiry Title as WavePick.

# **Installation Changes**

There are no installation changes included in this release.

## **UI Changes**

# Version 8.14.1

## **Renamed Wave Pick and Pick-Pack**

In the Handheld we have renamed WAVE PICK to **[WAVEPICK]** by removing the space.

Figure: Renamed to WAVEPICK

On the same [Shipping Module] we have renamed the PICK & PACK to **[PICKPACK]** by removing the [&] sign.

Figure: Pick&Pack changed to PICKPACK

Handheld	Shipping Module	WAVEPICK
Handheld	Shipping Module	PICKPACK

# **Version 8.14.2**

## Fusion Logo introduced on the Handheld

The icons and logos of the WMS App are now updated with the new Fusion Logo on the Login screen.

Figure: Fusion Logo introduced on the Handheld

# **Known Bugs and Issues Fixes**

# Version 8.14.1

- We have fixed an issue on the Shipment screen. After Partial Pack of the Pack Screen on the Handheld and Committing a shipment, the line details were incorrect. It showed the details of one of the two locations.
- We have resolved an issue that occurred when trying to create a MasterPack or Inner Pack with items that have Serial/Lot numbers using the Container API. The following error message was displayed: "Lot/Serial Nbr. 'LREX15026' cannot be found in the system. The issues found on the Line Details pop-up have been resolved.

- On the Sales Order there is an Order Priority Field [Drop-down Selection] for Priority, Expedited and Standard to filter the order priority. So, when creating a shipment using the selected order priority, the same order priority should be displayed on the Shipment and Invoices screen. While creating a shipment the order priority was not displayed properly. We have resolved that issue.
- We have resolved an issue in the Warehouse screen. The application threw an error while adding a new location and making it active when the user was saving it.
- We have resolved an issue in the Wave Pick Combined Report. On the [Process Shipment] screen if you select the action as [Create Wave Pick] and select multiple [Shipment Number] and process it and navigate to the Wave Pick Combined screen the application was showing an incorrect shipment number.
- We have resolved an issue with the Handheld. In the [Pick] screen, when you select the [Shipment] Number and click on [Skip], the item changes, but the description remains the same.
- We have resolved an issue with the Handheld. When scanning an item from a [Shipment] with different UOMs for the Base and Alternate IDs, the Handheld displayed the incorrect alternate Item ID.

- We have resolved an issue with the [Zone] tab. An error message was shown on the screen after creating and editing the created Zone.
- We have resolved an issue with the non-stock item screen. While opening the screen the application was throwing an error message (IN202000).
- We have resolved an issue with the Handheld. An error message appeared while committing a partial shipment on the Handheld.

• We have resolved an issue with package publishing. When Only Fusion Basic and Advanced packages were published, the Sales Order screen crashed.

# **Version 8.14.5**

- We have resolved an issue with the Warehouses where, despite the Active Locations being disabled, the Pallet Stock Location and Ship Stock Location were still displaying incorrectly.
- An error occurred in the application when a Committed action was performed on a Partially Packed item from the Shipment Screen from the Sales Order.
- The Picked status of the Shipment does not change to Packed on the Shipment screen after completing the Pack process with the Commit action.
- Clicking the [Next WavePick] button resulted in an error message stating, 'Input string was not in the correct format' on the Handheld.
- We have resolved an issue when creating MasterPacks containing items with Lot/Serial Numbers.
- We have resolved an issue with the Handheld in the Pack Module. The item description remains the same, even after changing the Item.
